

GV Macro Player Plug-in for Stream Deck - Connection Guide - January 2026

*Not compatible with Kayenne Classic

Computer running Stream Deck software must connect to the Switcher Network

Note the Frame IP address from the Switcher Frame

Drag a Connection Suite Action onto the Stream Deck, enter the Frame IP, and select a Suite from the drop-down.

On the physical or virtual Stream Deck, press the connection key. It should step through the visual 3 states depicted above.

Troubleshooting: If the Stream Deck doesn't connect to the Frame, verify connectivity by using a terminal ping command to the Frame IP from the computer running the Stream Deck. Verify the steps above. As a last resort restart the Stream Deck software and reattach the physical Stream Deck to the USB port.
